SKILLS

HTML / CSS	Node
Sass	Express
React	MongoDB
Redux	Loopback
UI / UX	MySQL
jQuery	Webpack
Bootstrap	ES6
Git workflow	Agile/ Scrum workflow

EDUCATION

Origin Code Academy, 2018

Full-stack Software Development

San Diego, CA

University of San Diego, 2013

Bachelor of Arts, Psychology
3.74 Overall GPA

PROJECTS

SpaceBox

Collaborated with a team of 8 engineers to build an online interactive jukebox using Spotify Web API. I transferred existing backend functionality from Express to Loopback and created endpoints using remote methods. Created tests using Mocha and Chai to ensure site functionality in future iterations.

Movie Finder

Built an application that allows users to search for movie information using the Open Movie Database. I created an Express server to deploy the OMDB API call. I built the frontend in React using Redux and React Router and styled it in SCSS.

Food Faceoff Hackathon

In 72 hours, I created a site that compares how much of one food you can eat compared to another. It calls an open source nutrition database, uses an image generator based on the food choices, and displays calories using Google charts. The app is built in React and styled with Styled Components in React.

WORK EXPERIENCE

Google, 2014 - 2018

Subject Matter Expert, AdWords Troubleshooting

Internal and external technical specialist for Google Ads online advertising platform. Resolve top user issues for Google's advertisers.

Training creation/ delivery, resource management, and product improvement. Transition product launches and workflow changes.

Advanced Brain Monitoring, 2014 - 2018

Neurotechnology Coordinator, AdWords Troubleshooting

Sales and support for Neurotechnology software and equipment at brain research company. Managed customer acquisition and supported users post purchase.

Apple, 2012 - 2013

Specialist

Apple in-store sales and technical support. Led workshops on iPhone, iPad and iCloud. Taught users how to use Apple's products and services.
